Thank You To Our Speakers

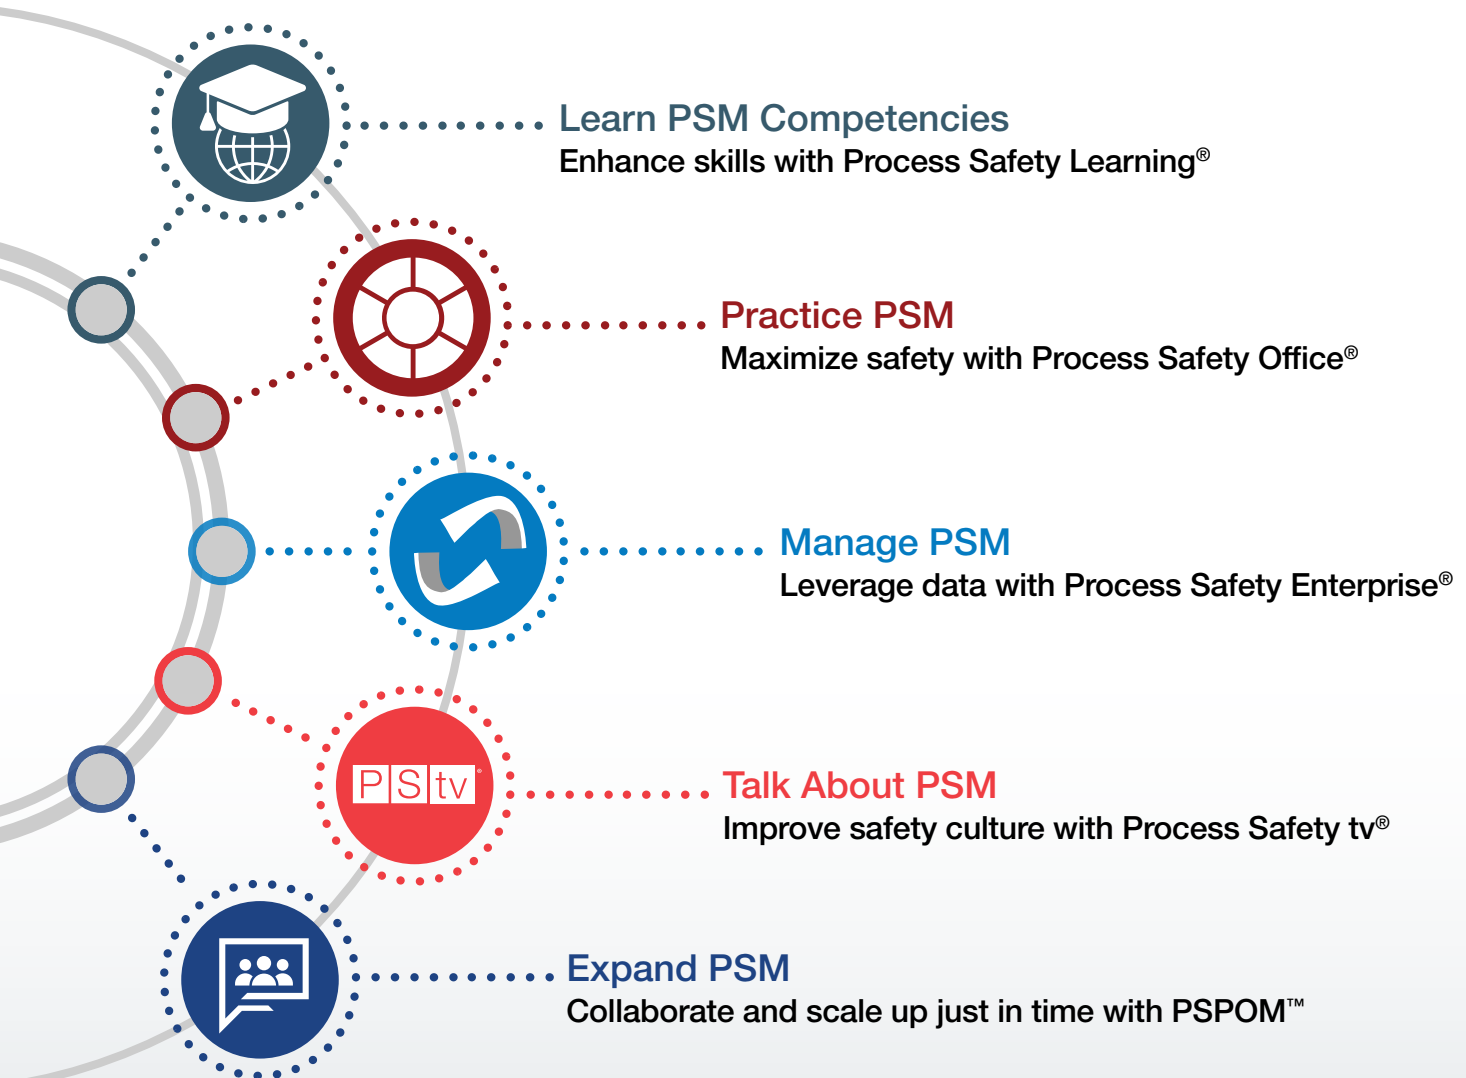

Our sincere appreciation for the outstanding presentations you've made to the 2019 Users Group Meeting. This event was informative and successful because of your efforts. Thank you.

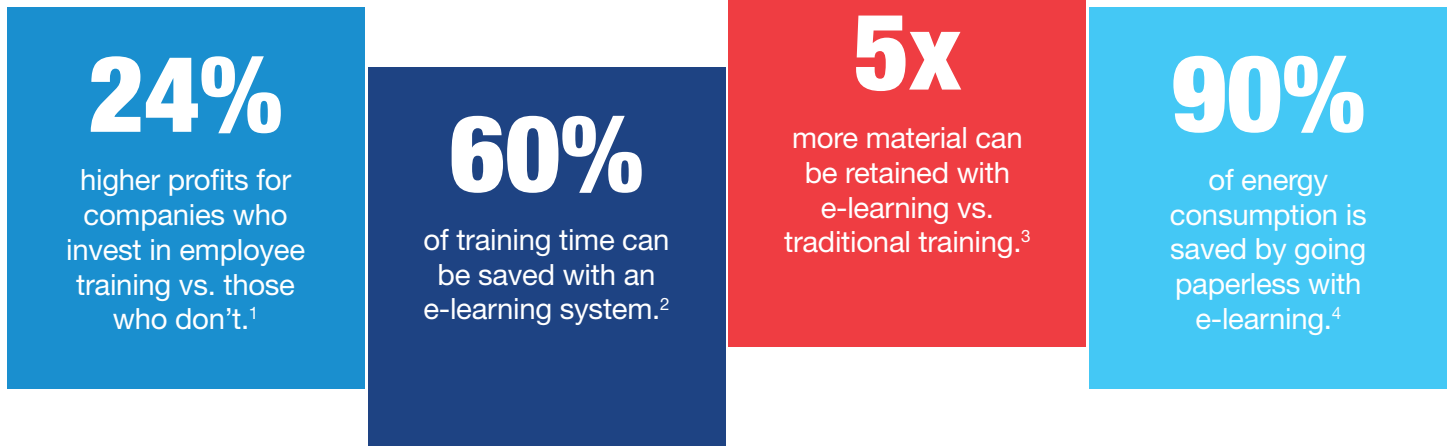

How We Connect the Dots We Are With You Every Step of the Way

As a certified ISO 9001:2015 Quality Management Systems (QMS) company, ioMosaic offers integrated process safety and risk management solutions to help you manage episodic risk, improve efficiency, and maintain compliance. Our multiple areas of expertise connect all the dots to protect the things that matter most: people, planet and shareholder value.

Other companies specialize in only one or two areas of process safety and risk management. ioMosaic connects all the process safety dots.

Advantages of Online Training

Learn PSM Competencies

Enhance Skills With Process Safety Learning®

A competent workforce is the ultimate competitive advantage. But there are challenges to constantly improving your team's performance. Instructor-based courses are not always practical, economical, or timely. How do you empower knowledge, skills, and resourcefulness of processes in the face of demanding work schedules?

According to C. William Pollard, Chairman of Fairwyn Investment Company, *"Information is a source of learning. But unless it is organized, processed, and available to the right people in a format for decision making, it is a burden, not a benefit"*.

Process Safety Learning® is the answer. Our online training platform delivers high quality, impactful risk management training for chemical, petrochemical, pharmaceutical, and other industries. Course content

is created by ioMosaic senior staff and invited industry experts well known for the depth of their experience, strong academic backgrounds and operations experience in safety, technology and risk management. Participants receive their CEU or PDH continuing education credits upon completion.

With Process Safety Learning®, organizations can author, deliver, and track training across multiple facilities. Learner activities such as attendance, course completion, scores, messaging and more are accessible via one single dashboard.

Learn More

See for yourself how this learning platform can improve your organization's ability to learn. View the presentation [Process Safety Learning Simplified](#) or visit psl.iomosaic.com.

1. According to a study across 2,500 U.S. companies by the American Society of Training and Development (ASTD), those that invested in comprehensive employee training enjoyed 24% higher profit margins.

2. Learning through e-learning typically requires 40% to 60% less employee time than learning the same material in a traditional classroom setting, according to a study by the Brandon Hall Group.

3. After implementing an e-learning program, IBM found that participants learned nearly five times more material without increasing time spent in training.

4. According to a study by the British Open University, 90% less energy is consumed and 85% less CO2 emissions with e-learning, as compared to traditional, face-to-face training.

Practice PSM

Maximize Safety With Process Safety Office®

Amidst a highly regulated environment, multinational energy companies need to improve compliance, risk management, and business efficiencies. The dynamic and expanding nature of obligations in this vertical is daunting. Staying on top of change is a critical challenge. It's time for a more comprehensive and straight-forward approach to process safety.

Process Safety Office® is an integrated, comprehensive software suite for safety professionals. PSO enables users to accelerate efficiency and accuracy with tools to conduct PHAs, DHAs, risk analysis, facility siting studies, pressure relief and flare systems design, compliance audits, and much more.

Professionals reduce error and make better informed decisions with Process Safety Office®. Used by consultants, recognized as industry standards by the AIChE, and distributed by the Design Institute for Emergency Relief Systems (DIERS) – Process Safety Office® is the *only* integrated risk management tool.

Learn More

Do you have challenges that could be met with better PSM software? View the presentation [Process Safety Office® - What You Should Know About PSO](#) or visit www.iomosaic.com/resources/videos to explore technology options that increase productivity.

Manage PSM

Leverage Data With Process Safety Enterprise®

Tracking and managing process safety responsibilities is difficult enough for one office – almost impossible for larger, multinational companies.

If you are struggling to keep critical PSM data and compliance information organized across your company, you need Process Safety Enterprise®. Our web-enabled system manages and stores process safety data, documents, and workflows across multiple facilities. PSE workflows take the guess work out of

project status and provide a current project snapshot for the whole team at any given time. Coordination and collaboration are easy with the user-friendly interface. Paired with ioMosaic's data hosting services, you can ensure your data is secure, centralized, and accessible.

Talk About PSM

Improve Safety Culture With Process Safety tv®

Organizations are always on the lookout for more innovative and effective ways to train and communicate with employees. Digital TVs are an excellent means of delivering information across multiple facilities. They can display information from many sources. Targeted content delivered via a corporate tv controls the message. It is important, too, that content be updated constantly to avoid the same content becoming stale.

Engaging a reliable source that doesn't require manual updates is critical. Messaging can also reflect your specific company's values. With Process Safety tv®, companies get a 24/7 live and on-demand digital video streaming platform dedicated to process safety, a platform that can be customized to your branding. Subscribers can search, download, watch and share process safety news and information. Training programs can also benefit from custom content highlighting your policies and guidelines.

Collaborate and Scale Up Just In Time With PSPOM™

For process safety consultants, accelerating opportunities and sharpening skills is a must. For small- and mid-sized companies, trying to find ISO certified process safety experts could jeopardize your project schedules.

How can you both stay ahead of the curve? Join the Process Safety Project Opportunity Marketplace. PSPOM™ will proactively link registered process safety experts with local and global projects for some of the largest companies in the world. As a registered expert, opportunities will arise that best meet your availability and expertise. You will also get to interact with ioMosaic's experienced team and gain access to

our library of white papers, publications, and videos on risk management. As a registered company, you will have access to an array of process safety subject matter experts who are ISO 9001 certified in quality management systems. All billing and administrative activity will be between you and ioMosaic, with no need to deal with outside third parties. Companies are assured of quality and availability, when and where needed.

Learn More

Scaling up has never been easier or quicker. Contact us at sales@iomosaic.com to learn how PSPOM™ can connect you with new opportunities and increase your impact on process safety.

2019 Highlights

Thank you for attending the 13th Annual Global Software Users Group Meeting. We hope that you found the event informative and worthwhile. Our primary goal was to increase your understanding of how to use the powerful process safety tools you have and learn of new developments to help minimize your company's risk and maximize its potential. We also benefit greatly from your input, often utilizing your comments in next generation upgrades.

January 27 - 28, 2020
