" *We chose PSE as cost was a factor; it was less than some of the other options we reviewed. Also, the ability to format the workflows to incorporate our existing procedures and practices met the needs of our facility PSM program.* "

Manage Incident Reporting More Effectively

Process Safety Enterprise® is the ultimate enterprise system that administers workflows, manages data and documents, enables knowledge sharing, and enhances communication and collaboration. PSE also possesses extensive PSM compliance applications. The Incident Investigation Workflow module enables an effective business rules engine that enables the management of your entire incident reporting and investigation process, from the initial reporting of the incident to closure.

Relevant data is stored in a unique library created for each incident. Recommendations can be entered and tracked within PSE. As each task is completed, the appropriate individuals are notified by email to ensure that the workflow proceeds in a timely manner. The workflow can be implemented at multiple locations simultaneously using the organization chart for each facility. At the corporate level, company-wide incidents can be managed and analyzed for all locations worldwide.

Minimize Risk

- Ensures that regulatory and company notifications have been communicated following an incident.

- Enables the incident team to be selected based on the type of incident.

- Creates a library to store incident data in the following categories: people, physical, electronic, position, and paper.

Maximize Potential

- Enables a root-cause analysis to be conducted and documented using the Comprehensive List of Causes technique.

- Enables an incident report to be reviewed and approved online.

- Enables an incident to be classified to allow for incident-trend analysis, as well as for use in PHAs.

FAQs

■ Why are workflows essential?

Tracking and managing process safety responsibilities is challenging for one office and company – almost impossible for larger companies. Process Safety Enterprise® workflows take the guesswork out of project status and provides a current project snapshot for the whole team at any given time.

■ Who needs this system?

If you are struggling to keep critical PSM data and compliance information organized across your organization, our system will streamline and centralize this management onto one platform. It makes coordination and collaboration easy with its user-friendly interface and powerful tracking abilities.
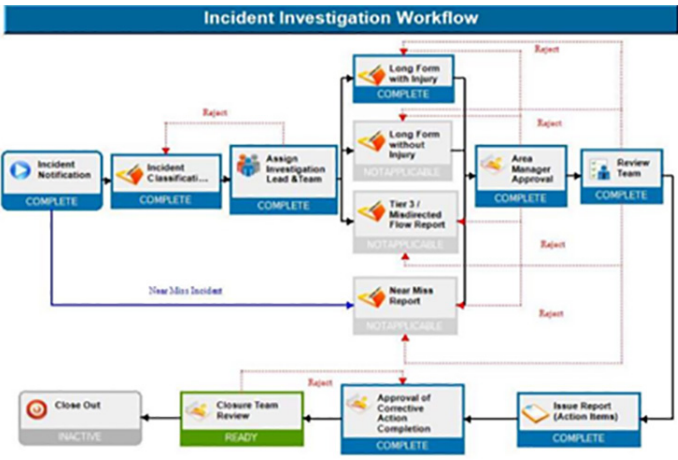

■ What are the licensing terms?

We offer flexible programs to fit your needs and budget. Please contact our sales team to learn more.

HOW DO I GET STARTED?

See for yourself how this centralized, easy-to-use, web-based platform can manage the lifecycle of your critical PSM compliance data and engineering data. It's about reducing risk and maintaining compliance while maximizing efficiency. Ask for a demo today!
