

PSE Managed Application Hosting

Application Services for Managing Core Enterprise Systems

Reliable, Secure, Optimal High-Capacity Performance

Our hosting provides seamless process safety information management for your data. With our managed application hosting solution in place, we guarantee that you will be more confident and secure with the flexibility and reliability of your process safety information data – in a highly resilient environment with fast performance to maintain your competitive edge.

Benefits Include

- Regularly inspected data backup.
- Rigorous disaster recovery processes.
- Redundant power supply: electricity, internet connectivity, network infrastructure and all hardware components, including entire data center replication.
- Accelerated problem resolution due to proactive monitoring of speed issue identification and other potential issues.
- Consistent updates to or maintenance of applications, database and/or operating system as well as patching.
- Maintenance and updates are coordinated and implemented on your schedule
- Dedicated, in-house technical support team.
- Expert support available via telephone or online to provide quick responses and turnarounds for questions, updates and reduced pointers.
- Climate controlled, security-rich hardware storing facility.
- Hosting infrastructure and application is backed by leading Service Level Agreements (SLA).
- Competitive pricing structure.
